

3-1	Growth in GNP per capita for seven nations	197	3-38	Run 3-2: behavior of the capital sector when the average lifetime of industrial capital is increased from 14 to 21 years with standard inputs	245
3-2	International Standard Industrial Classification	197	3-39	Run 3-3: behavior of the capital sector when the capital-output ratio is decreased from 3 to 2 years with standard inputs	246
3-3	GNP per capita versus the contribution of primary and industrial production to total output during the development of nine countries, 1860-1960 (time-series data)	198	3-40	Run 3-4: behavior of the capital sector when the industrial capital-output ratio is increased from 3 to 4 years with standard inputs	246
3-4	GNP per capita versus the contributions of primary and industry production to total output at one point in time for nineteen large countries	199	3-41	Run 3-5: behavior of the capital sector when the fraction of capital allocated to obtaining resources is increased from 0.05 to 0.35 with other inputs at their standard values	248
3-5	Shifts in the composition of national product in nine nations, 1870-1950	200	3-42	Run 3-6: behavior of the capital sector when the service capital-output ratio is increased from 1 to 2 years with standard outputs	248
3-6	Growth in total product and shifts in product composition, Sweden, 1890-1950	201	3-43	Driving functions for capital sector experiencing increasing resource costs	249
3-7	Economic statistics for fifty-four countries	202-203	3-44	Run 3-7: behavior of the capital sector when the fraction of capital allocated to obtaining resources increases after 1970	250
3-8	Capital stocks and output flows in the global economy	204	3-45	Driving functions for capital sector undergoing increasing food costs	250
3-9	The current value of capital as a function of time, the capital's initial value, the expected lifetime of the capital, and the depreciation method	209	3-46	Run 3-8: behavior of the capital sector when the fraction of industrial output allocated to agriculture increases after 1970	251
3-10	The causal relationships that can produce any specified development patterns	211	3-47	Driving functions for a population decline in the capital sector	251
3-11	Standard form of the relationship between industrial output per capita and indicated service and food outputs per capita	211	3-48	Run 3-9: behavior of the capital sector when the population declines after 1970	252
3-12	Causal-loop diagram of the capital sector	213			
3-13	DYNAMO flow diagram of the capital sector	215	4-1	Food, food per capita, and population for the world, 1952-1970	260
3-14	The relation between capital and output for rising and for constant capital-output ratios	217	4-2	Grain production, yield (food output per hectare-year), and cultivated land area for industrialized and nonindustrialized nations, 1952-1970	260
3-15	Capital-output ratios for seven selected countries	218	4-3	Grain yields, 800-1970	261
3-16	Evolution of the U.S. capital-output ratio, 1900-1968	218	4-4	The global consumption of fertilizer, 1938-1968	261
3-17	National GNP per capita growth rates for seventeen countries for time periods during the interval 1864-1967	220	4-5	The global consumption of pesticides, 1948-1968	262
3-18	Estimates of the magnitude and composition of average global GNP per capita, 1900 and 1968	220	4-6	Decreasing returns to fertilizer use	262
3-19	The fraction of industrial output allocated to consumption versus GNP per capita	224	4-7	Land fertility decrease in Ohio, U.S.A., 1870-1938	263
3-20	Fraction of industrial output allocated to consumption table	225	4-8	Current and potential food output from the world's arable land, oceans, and grazing land	264
3-21	DYNAMO flow diagram of feedback loop governing investment in services	226	4-9	The feedback-loop structure of the agriculture sector	269
3-22	The relation of service output per capita to industrial output per capita	227	4-10	Loop 1: food from investment in land development	270
3-23	Indicated service output per capita table	228	4-11	Loop 2: food from investment in agricultural inputs	271
3-24	Fraction of industrial output allocated to services table	229	4-12	Loop 3: land erosion accompanying high yields	273
3-25	Labor force statistics for thirty-two countries	234	4-13	Loop 4: land fertility impairment	274
3-26	Empirical relationship between the jobs per industrial capital unit and the industrial output per capita for sixteen countries	235	4-14	Loop 5: land fertility regeneration	275
3-27	Jobs per industrial capital unit table	235	4-15	Loop 6: immediate food increase from discontinuing land maintenance	276
3-28	Empirical relationship between the jobs per service capital unit and the service output per capita for sixteen countries	236	4-16	DYNAMO flow diagram for the agriculture sector	277
3-29	Jobs per service capital unit table	237	4-17	World land area in different agricultural categories	278
3-30	Agricultural inputs per hectare versus industrial output per capita	238	4-18	The geographic distribution of the potential for expansion of agricultural land	280
3-31	Number of agricultural workers per hectare versus gross domestic product for nineteen countries, 1960	239	4-19	Average cropping intensities in developing countries, 1961-1963	281
3-32	Jobs per hectare versus agricultural investment per hectare for ten countries	239	4-20	Caloric content of several crops (harvested weight)	282
3-33	Jobs per hectare table	240	4-21	Per capita consumption of vegetable calories and GNP per capita for several countries, 1968	283
3-34	Alternative possible assumptions concerning jobs per hectare	240	4-22	Income and per capita grain consumption, 1960	283
3-35	Postulated relationship between the labor utilization fraction delayed and the capital utilization factor	242	4-23	Fraction of income used for food at different income levels in Madras, India	284
3-36	Driving functions for the standard run of the capital sector	243	4-24	Indicated food per capita as a function of industrial output per capita	285
3-37	Run 3-1: standard run of the capital sector with exogenous inputs	244	4-25	World production of major commodities, selected years	285
			4-26	Indicated food per capita table	286
